Contents

1. Introduction 5
2. Thermally grown silicon oxide films on silicon in dry O_2 7
   - 2.1. Preliminary considerations on kinetics, composition and structure 7
     - 2.1.1. Kinetics 9
     - 2.1.2. Composition 11
     - 2.1.3. Structure 13
     - 2.1.4. Point defects 16
   - 2.2. Atomic transport in the formation of silicon oxide thin films 19
     - 2.2.1. Oxygen isotopic substitution 19
     - 2.2.2. Si isotopic substitution 21
     - 2.2.3. Oxygen incorporation in the near-surface region 26
     - 2.2.4. Diffusion of defects in the near-surface region 31
     - 2.2.5. Atomic transport mechanisms 33
     - 2.2.6. Effects of impurities on atomic transport mechanisms 35
   - 2.3. Atomic transport in the formation of ultrathin films 36
     - 2.3.1. Atomic transport in the ultrathin film regime 36
     - 2.3.2. Reactive layer model 37
     - 2.3.3. Isotopic substitution experiments with sub-nanometer depth resolution 41
     - 2.3.4. Atomic transport mechanisms 45
     - 2.3.5. Diffusion–reaction in thermal growth of silicon oxide films on Si 48
3. Hydrogen in ultrathin silicon oxide films on c-Si 53
   - 3.1. Incorporation and release of hydrogen (^1H) and deuterium (^2H or D) 53
   - 3.2. Hydrogen and deuterium transport 57
4. Silicon nitride films on silicon 65
   - 4.1. Introduction: thermal nitridation of silicon in ammonia (NH_3) 65
   - 4.2. Kinetics 66
   - 4.3. Interface and surface compositions and point defects 68
   - 4.4. Hydrogen incorporation and depth distribution 70
   - 4.5. Atomic transport and growth mechanisms 70
     - 4.5.1. Mobile species 70
     - 4.5.2. Atomic transport mechanisms 74
     - 4.5.3. Growth mechanisms 77
5. Thermally grown silicon oxynitride films on silicon 80
   - 5.1. Introduction 80
   - 5.2. Nitric oxide (NO) 81
     - 5.2.1. Ultrathin silicon oxynitride films grown by direct exposure of Si to NO 81
     - 5.2.2. Nitridation of ultrathin silicon oxide films in NO 87
   - 5.3. Nitrous oxide (N_2O) 96
     - 5.3.1. Ultrathin silicon oxynitride films grown by exposure of Si to N_2O 96
     - 5.3.2. Nitridation of ultrathin silicon oxide films in N_2O 105
   - 5.4. Nitridation of ultrathin silicon oxide films in ammonia (NH_3) 106
     - 5.4.1. Mobile species 106
     - 5.4.2. Isotopic substitution of oxygen and nitrogen 112
     - 5.4.3. Isotopic substitution of hydrogen 115
     - 5.4.4. Atomic transport mechanisms 119
   - 5.5. Reoxidation of oxynitride films in O_2 121

6. Some synergistic gas sequences: $O_2 \rightarrow NH_3 \rightarrow N_2O$ and $N_2O \rightarrow NH_3$ 130
7. Atomic transport across the interfaces in oxide/nitride/oxide ultrathin films on Si 138
7.1. Ultrathin oxide/nitride/oxide structures on Si 138
7.2. Isotopic substitution of O and N in the growth of ultrathin ONO structures 140
